**TRUSTED SINCE 1929**

**BONIDE®**

**Termite & Carpenter Ant Killer II**

Kills on contact and with residual killing power for 2 to 4 weeks

**Carpenter Bee**

**Termite**

**Kills On Contact**

This type of treatment is intended to be a supplemental treatment for control of drywood and above-ground subterranean termites.

**ACTIVE INGREDIENT**

(E)-3-phenyl-2-[2-(prop-2-ynyl)phenethyl-4]-chloro-alpha-[methyl-2H]-benzeneacetaldehyde = 0.050%

**OTHER INGREDIENTS**

99.950%

Total 100.000%

**EPA Est. No. 11621-5A-1 (R), 5693-MA-1 (M)®**

**Pacific > 50251-0 or number of batch code on container**

**EPA Reg. No. 1021-1701-4**

**For use in: Apartments, Commercial Buildings, Condominiums, Day Care Centers, Food Plants, Garbage Can, Homes, Hotels, Hospital Plants, Institutions, Motels, Nursing Homes, Office Buildings, Other Public Buildings, Ponds, Pools, Pits, Railroad Cars, Restaurants, Schools, Sites, Supermarkets, Transportation Vehicles (except aircraft), Warehouses, and Zoos.**

**HOW TO USE:** To Kill Ants, Crickets, Centipedes, Silverfish, Firebrats, Earwigs, Seawbugs, Pinbugs and Spiders: Spray to contact as many insects as possible while thoroughly spraying all areas where the pests are suspected of hiding, such as the floor and baseboard areas of the pantry, food and pet food storage areas, cracks and crevices in walls and floor materials, under sinks, under stoves, under refrigerators, around garage containers, cabinets, door and window trim, thresholds, door and window frames, around floor drains, storage and utility-related areas, outside of the installation, as well as where plumbing goes through the walls. Spray surfaces to wet but not to the point of runoff. For Ants, also spray ant trails and the places where these pests come into the building.

**FOR COCKROACH CONTROL:** Cockroaches (pale, nymphs) - American Cockroach, German Cockroach, Asian Cockroach, Smoky Brown Form - American Cockroach, Oriental Cockroach (CRACK AND CREEVE SPRAY). Apply spray in small amounts directly into cracks and crevices. Special attention should be paid to areas such as behind baseboards, connection areas around drains, pipes, behind and beneath sinks, stoves, plumbing, and other visible cracks and crevices. Spray these areas leaving a certain amount of spray in unseen areas. Care should be taken to avoid disposing of this product into exposed surfaces or introducing the material into the air. Avoid contamination of food or food handling surfaces.

**CONTACT APPLICATION:** Contact as many insects as possible with this spray in addition to spot spraying all parts of the room suspected of harboring these pests. Special attention should be paid to holding places such as beneath sinks, behind and beneath sinks and refrigerators, around garbage cans, cabinets, the outside of basements, door frames, floors, and around pipes, drains, trash, and the pest's ports. Spray the underside of rugs and carpets, when possible, allowing spray areas to dry before replacing objects on floor. To Kill Flies and Ticks: Prior to treatment, thoroughly vacuum the floor, upholstered furniture, baseboards, and pay special attention to areas where pets rest and areas under furniture. Remove and dispose of the vacuum bag containing ticks, fleas and flea eggs, larvae, and pupae in the garbage. Preferably put it into a plastic bag that can be stored in the garbage. This will prevent escapes from the garbage, which will reinfest the area. Apply as a spot treatment to areas such as the pet resting areas, pet beds, carpets and crevices, along baseboards, under furniture, and other areas where fleas and ticks are located.

To prevent reinfection of the treated area with fleas and ticks, and to protect your pets, treat the animals with an EPA registered product labeled for use on animals and also treat the outdoor areas with an EPA registered product labeled for that use.

**Wood Destroying Insects:** Localized treatment for termite and beetles (Bostrychidae, Buprestidae, Cerambycidae, Lyctidae, Ceramodidae, Scolytidae) Carpenter Ants, Carpenter Bees, and Termites: Localized insecticidal powder and/or insect dusts can be used for localized dusting. Delong brand 8 to 10 inches apart or enough to ensure coverage, inject 5 to 10 per cent per hole. Do not contact electrical wiring or plumbing. Treatment of exposed surfaces should be done thoroughly while covering exposed insect tubing, but excess runoff should be avoided.

This type of treatment is intended to be a supplemental treatment for control of drywood and above-ground subterranean termites and other wood destroying insects. The purpose of such applications of this product for termites is to control or suppress the colony, or to prevent infestation. This product is not recommended as sole protection against termites. For active termite infestations, please contact a professional inspector, not registered for control in California.

**STORAGE AND DISPOSAL:** Do not contaminate water, food, or feed by storage or disposal. Store in original container away from heat, light, and cold, dry area. Always store pesticles in the original container. Store away from food and pet food. Pesticide Disposal and Container Handling: Do Not Puncture or Inhale Nonvolatile container. Do not reseal or refill this container. If empty, Place in trash or offer for recycling if available. If partly filled Call your local solid waste agency for disposal instructions.
